Dear Recruiter,

I am very interested in the Software Engineering Intern. Since I love solving challenging problems and I can pick up things quickly, this program would be a great opportunity for me.

As a student with double major in Computer Science and Mathematics, I have strong quantitative skill and coding skill. I did a project called Logo Design, which enables users to create new logos, retrieve old logos from the database and update logos. I used MongoDB as my database, GraphQL to send response from the database to the front end, Node.js as my backend server, Express.js as my server framework, and React.js for the front end.

In addition to my enthusiasm, my team working skill makes me a valuable team member. I have done a team project called Activity Organizer, which designed to help students at my university to connect with each other and make new friends during remote learning. We used Firebase and React.js for this project. Working remotely as a team is challenging, but my team kept communicating with each other and powered through.

I look forward to the opportunity to discuss my skills and qualification at your earliest convenience. Please reach me by email at Gordon.zhong99@gmail.com. Thank you for your time, and I look forward to hearing from you soon.

Sincerely,

Gordon Zhong
